

OM PATEL

AEM DEVELOPER | AEM 6.5 | AEM as a Cloud Service
+91 7219769402 | patelomm.2003@gmail.com | [linkedin.com/in/patel-om-m](https://www.linkedin.com/in/patel-om-m)

PROFESSIONAL SUMMARY

AEM Developer with 2+ years of hands-on experience delivering enterprise AEM solutions across AEM 6.5 and AEM as a Cloud Service. Experienced in AEM component development, Sling Models, OSGi services, Servlets, REST APIs, Content Fragments, Experience Fragments, Dispatcher, localization/i18n, and AEM platform migrations. Strong foundation in Java, JavaScript, HTML5, CSS3, responsive UI development, API integration, unit testing and CI/CD. Currently expanding expertise in React and modern frontend development, with an interest in AEM–React integrations.

CORE TECHNICAL SKILLS

AEM: AEM 6.5, AEM as a Cloud Service, AEM Dispatcher (Cloud Service), Sling Models, HTL, Servlets, OSGi Services, JCR, QueryBuilder, Core Components, Editable Templates, Experience Fragments, MSM, Workflow Models, Scheduler Jobs, Content Fragments, AEM Assets, localization/fallback

Java / Web: Java, JavaScript, React, HTML5, CSS3, responsive UI development, REST APIs, API troubleshooting

Cloud / DevOps: AEM as a Cloud Service, Cloud Manager, CI/CD, Docker, Maven, Git, Dispatcher validation and configuration, cache/filter/rewrite configuration, migration tooling

Development Practices: Agile/Scrum, Git, unit testing, code quality and security remediation.

Tools: IntelliJ IDEA, VS Code, Postman, Jira

PROFESSIONAL EXPERIENCE

AEM Developer | **Infodales Tech Solutions** | 09/2024 – Present

AEM Training & Internal Enablement | Oct 2024 – Dec 2024

- Completed structured onboarding, AEM training and hands-on internal enablement before client project allocation.

Enterprise Client – Confidential | Oct 2025 – Present | Current / Long-Term Project | AEM 6.5 → AEM LTS

- Supported AEM 6.5 → AEM LTS migration activities, including compatibility remediation, code/configuration updates, dependency validation, regression testing and environment verification.
- Designed and implemented locale and page fallback logic so AEM resolves appropriate fallback content when requested localized content is unavailable, working with locale hierarchies and request-resolution behavior.
- Built a Content Fragment fallback service that resolves missing localized fragments through configured fallback locales instead of returning a 404, gated behind cf-fallback=true to preserve default behavior.
- Implemented and refactored fallback behavior across Sling Filters, Sling Servlets and backend services; validated request flows in Postman and added JUnit/Mockito coverage for fallback and non-fallback paths.
- Enhanced GlobalLink and localization behavior across supported locales, troubleshooting translation failures, locale mappings and reverse-translation edge cases while preserving the requested locale in UI/content behavior.
- Extended cross-category blog retrieval and implemented Ghost Post filtering at the model layer using Core Component resource-supertype delegation; investigated Content API edge cases and hardened backend handling for missing properties.
- Diagnosed token-replacement differences across Publish, Dispatcher and CDN layers using cache headers, AEM logs and request tracing; supported security remediation and regression troubleshooting for backend features.

Internal AEM Cloud Migration & Assets Enablement | Shadow / Support Assignment | AEM 6.5 → AEM as a Cloud Service

- Supported BPA/CAM assessment and migration remediation activities for an AMS-based AEM implementation moving to AEM as a Cloud Service, including code/configuration compatibility work and validation.
- Contributed to Dispatcher migration and Cloud validation across virtual hosts, farm files, rewrite rules, include/header rules, filters and cache configuration, using the Cloud Dispatcher Docker image for local validation.

- Supported Connected DAM integration between AEM Sites and Assets environments, troubleshooting remote asset access, mount-point alignment, API connectivity and CORS behavior.
- Contributed to AEM Assets programmatic upload flows, including the Direct Binary Upload initiate-upload and complete-upload sequence for AEM as a Cloud Service.
- Supported DAM ingestion automation and downstream processing involving file transfer automation, Workflow processing, scheduled Job Consumer execution, repository queries and REST forwarding.

HKBU | Completed Project | AEM 6.5

- Built reusable AEM components for news, events and navigation experiences, supporting responsive content presentation across enterprise websites.
- Implemented QueryBuilder-based content retrieval and tag-driven components for dynamic content delivery.
- Supported responsive AEM templates and component behavior across environments along with Dispatcher Cloud configuration.

EDUCATION

Bachelor of Computer Applications (BCA) | Grow More Institute of Computer Applications | 2021 – 2024
